

Transforming Health Infrastructure, **One System at a Time**

CRISP Shared Services is an innovative nonprofit sharing technology and expert strategy to empower localized healthcare ecosystems.

OUR APPROACH

We believe building modern, locally tailored health infrastructure can be affordable, scalable and impactful.

Sustainable

Modern infrastructure can be interoperable and efficient – which is why our approach focuses on optimizing existing technologies and cross-sector resources.

Collaborative

Solutions are impactful when developed by those that rely on them – which is why we co-create answers directly with the users of our tools.

Autonomous

Stakeholders know the unique needs of their communities - which is why we preserve the autonomy and individuality of our affiliates and partners.

Flexible

Improving the utility of data while reducing total costs is possible – which is why we leverage reusable technologies and share economic incentives.
